

SAADAT SULTANALIEVA

Middle Python Backend Developer | FastAPI | Django

[LinkedIn](#) | [GitHub](#) | [\(+996\)704-417-756](#) | saadatssu@gmail.com

SUMMARY

Middle Python Backend AI Engineer with **3 years of experience** building high-load applications using **FastAPI, Django, DRF, PostgreSQL, Redis, Celery, Apache Kafka, RabbitMQ, AWS and GCP**. Optimized database queries. Built robust CI/CD pipelines using Github Actions and Docker. Collaborated within Agile/Scrum teams of 5–20 engineers across US based startups, conducting code reviews and enforcing best practices. Delivered solutions for **healthtech, gamedev, e-commerce, and AI** business domains across US markets. Integrated production-grade LLM capabilities using **OpenAI API** and Claude into core platform features.

SKILLS

Languages: Python3, SQL, Bash, TypeScript, Javascript

Backend: Fast API, Django, DRF, Pydantic, Celery, SQLAlchemy, httpx, aiohttp, asyncio, gRPC, Highload, OAuth2, Swagger, OpenAPI, REST API, WebSockets, Microservices

Databases: SQL, NoSQL, PostgreSQL, MongoDB, Redis, ElasticSearch, ClickHouse, Supabase

Message Brokers: RabbitMQ, Apache Kafka, Redis Pub/Sub

Cloud & DevOps: AWS, Docker/docker-compose, Nginx, Prometheus, Grafana, OpenTelemetry, GitHub Actions, GitLab, Linux, Bash, Firebase

Testing & Monitoring: Unittest, Pytest, Integration Testing, DataDog, Sentry

Frontend: HTML, CSS, JavaScript

AI Engineering: Langchain, Langgraph, Prompt Engineering, Fine-tuning, HuggingFace, Chat GPT, OpenAI API, Gemini, Cursor AI, Claude AI, LLM Integration, RAG (Retrieval-Augmented Generation)

Version Control: Git (GitHub, GitLab, BitBucket)

Other: Concurrency, Asynchronous I/O, Multiprocessing, Multithreading, System Design, Algorithms & Data Structures, SOLID, DRY, KISS, DDD, OOP, OOD, AGILE, CQRS, Monolith, Event-Driven, Highload

WORK EXPERIENCE

Senior Python Backend AI Engineer | HLTH Lab Inc. | , USA (remote)

December 2024 – January 2026

HLTH Lab Inc is an AI-based HealthTech startup.

- Designed and maintained event-driven data pipelines with Celery + Redis + webhooks (Vital/Stream), supporting asynchronous processing of biomarkers, sleep, chat, and user health updates.
- Developed AI-powered doctor concierge workflows using LangGraph/LangChain integrations, enabling structured conversational health assistance and agent-service orchestration.
- Designed and implemented an AI-driven alerting system for cardiovascular and sleep health, continuously monitoring RHR (Resting Heart Rate), HRV (Heart Rate Variability), and sleep metrics from wearable data to surface clinically relevant anomalies and proactive recommendations.
- Built and deployed a production-grade REST API powering the Caloric Balance screen, aggregating wearable and nutrition data to track calories consumed vs. burned in real time, and layering on AI-based personalized nutritional insights to optimize users' daily energy balance.

Middle Python Backend Engineer | Worlds Gaming Corp. | New York, USA, remote
Worlds is a gamedev startup. I worked on the n8n platform that automates company processes.

July 2023 – September 2024

- Implemented OAuth-based user login with Steam integration.
- Developed game builds' upload history logs using AWS Lambda and AWS S3 triggers.
- Implemented automatic transcriptions of Discord voice calls using Deepgram.

Contributor | [Google Summer of Code](#), [Apache Beam](#) | USA, remote
Worked on an AI-Based Autocompletion Plugin for apache beam

May 2023 – August 2023

- Designed and implemented an IntelliJ IDEA plugin from scratch using Java.
- Fine-tuned the StarCoder model using Apache Beam code samples, significantly improving code autocompletion accuracy.

Python Backend Developer | [Reviro.io](#) | Bishkek, Kyrgyzstan
Worked on [Snapsome](#) – a marketplace for high-value items that are trackable.

March 2022 – March 2023

- Engineered a real-time chat system using WebSockets to streamline buyer-seller communication inside the platform.
- Integrated social media verification (Instagram, Reddit, Flickr, Twitter) to enhance user credibility and trustworthiness.
- Implemented an item offer system that allows buyers and sellers to negotiate prices, increasing engagement.
- Boosted website performance by implementing a Read-Through caching pattern with Redis to cache main page banners.
- Created efficient Docker-based deployment pipelines using Github Actions and GCP.

EDUCATION

Bachelors of Arts in Software Engineering | American University of Central Asia | 2019 – 2022

LANGUAGES

English – Advanced C1, Russian – Native

I hereby give consent for my personal data included in the application to be processed for the purposes of the recruitment process in accordance with Art. 6 paragraph 1 letter a of the Regulation of the European Parliament and of the Council (EU) 2016/679 of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/C (General Data Protection Regulation)
